

## Press Release

November 2014

Struggling to source suitable switch panels in the time frame required Witney Cables Limited of Swindon turned to City Electrical Factors and Proteus Industrial switchgear for a solution.

The ability to produce not only standard distribution boards but bespoke units that in certain instances were required to fit in limited spaces were a key consideration during their recent contract at the Defence Academy of the United Kingdom based at Shrivenham.

As a British manufacturer Proteus Industrial switchgear of Telford were able to fully support the installation by way of technical specification, data sheets and on-site liaison.

Replacing old equipment Proteus supplied a main switch board for the robotics area with a 500 amp incomer and 24 outgoing moulded case circuit breakers (MCCB's) with integrated miniature circuit breaker (MCB) distribution boards with surge protection and multi-metering.

Outdoors a bespoke IP56 MCB distribution board was used with various contactors to switch the street and area lighting under PIR and timer control. "Proteus were able to design and build exactly what we wanted", said Justin Davis and most importantly deliver it when we needed it".
